

### Requirement

MPG designed commercial grade manifolded system, feeding 68 hotel rooms and commercial kitchen, sized and designed to spec.

### System Specification

Four (4) x 27 Gas Continuous Flow 88° internal flute systems  
Two (2) x 415 litre storage tanks  
Two (2) x Alternating circulating pumps 32r with alarm system  
One (1) x UV Filter  
Six (6) stage commercial AS. approved tempering Batbox  
Temperature control and wiring components connecting storage tank

### Solution

MPG delivered a continuous flow Tanpak that incorporated four Gas Continuous Flow internal flute systems and two 415L storage tanks. The two tanks ensure system redundancy, so that in the rare instance of a single tank expiry, the system will continue to supply the hotel's requirements with no impact on production. The Rheem continuous flow Tankpak supplies up to 90-litres-per-minute at 75°C. A unique product designed to run at higher temperatures than domestic units.
